

EXP NO: 01	Basic SQL Commands
DATA: 27/01/2022	

Aim: To implement basic commands in SQL like insert, modify select etc.

Description about the problem:

- Create a table in SQL for patients and add patient details.
- Display the inserted table.
- Select specific rows from the table
- Altering the tables data
- Updating the tables values with arithmetic operations
- Deleting an entry in a table

These are the basic commands that are required to perform

Queries:

- create table g1(empid integer, ename varchar2(30),sal integer,dob date)
- desc g1
- insert into g1 values(01,'Ram',20000,'20-march-1982')
- select empid,ename from g1
- select empid,ename from g1 where sal >15000
- update into g1 set gr=(sal+3000)
- delete from g1 where empid = 2
- alter table g1 modify ename varchar2(40)

Result:

Successfully implemented the commands for insert, create, update, delete and alter
